Cochise III	6.4
2nd Millennium	6.3
Finesse II	5.8
Lowest	5.1
LSD	1.0

Cochise III rates equivalent to the top variety in overall turf quality in the 2002 NTEP report (Schedule A). Cochise III was selected out of Rutgers University based on its dark, open turf, and disease resistance. Cochise III has an endophyte level of 88%, which makes it a very persistent and tolerant tall fescue, even under stress. Cochise III's high traffic tolerance makes it an excellent choice of sports fields and other high traffic areas. Look for yourself and you will see Cochise III is one of the BEST tall fescues available today.

Notable Characteristics:

- Very Dark Green
- Improved Disease Resistance
- High Endophyte
- Very Dense Turf
- Drought Tolerant
- Fine Leaf Texture
- Improved Traffic Tolerance
