

GRAZEMASTER

THE ULTIMATE WINTER RYE

MAXIMUM FORAGE RESULTS

Grazemaster is a product of natural selection. Plants from the best selections of old rye stands were examined and from their color, growth and leafiness during a period of cold stress were selected for the breeding of Grazemaster. With further screening Grazemaster was the result. We now announce that Grazemaster is the improved premier Winter-Spring forage in our area. It was selected from another known, older variety Winterking. Grazemaster and Winterking grow side by side in production fields.

HIGHLIGHTS OF GRAZEMASTER

- * Grazemaster is an excellent producer of leafy forage from September through May.
- * Grazemaster is widely adaptable. Results have been excellent throughout the South.
- * Grazemaster is very cold tolerant and highly suitable in the Carolina's and Virginia.
- * Grazemaster is leafier than many other strains of rye. Better leave quality makes it a higher quality forage, containing higher protein and calcium with better palatability. Trials have been conducted in Oklahoma with 'vns' rye next to Grazemaster and the cattle would eat the Grazemaster first.
- * Grazemaster is very versatile – it performs equally well with beef, milk and sheep operations for grazing, silage, greenchop and haying.
- * Grazemaster rotates well with summer cash crops and summer forage crops. (Such as Evergreen'S Haymaster Sorgo-Sudangrass Hybrid.) Grazemaster can be interseeded into existing pastures.
- * Grazemaster has excellent regrowth following close grazing or cutting.
- * \$\$\$\$\$ -- More beef, more profit, more money. Every dime is important and we at Evergreen Seed understand that more than anyone. We offer Grazemaster to ensure satisfaction and better profits to our dealers.
- * Highest Quality -- Grazemaster is sold as a premium product. That means no noxious weed seeds will be in this bag. You are buying the highest quality rye with the maximum amount of seed in the bag.

“The Dealer’s Choice”
