

# Hay Master

## Sorgo-Sudangrass Hybrid

Evergreen Seed Distributors proudly presents a newer sorgo-sudangrass hybrid that has all the outstanding qualities needed for forage production featuring juiciness and sweetness. Hay Master is a fast emerger enabling a quicker first cutting. The seed appears more like a sorgo and grows plants just as sweet. This plant has more disease free leaves, finer stalks, early vigor and quick regrowth than many previous varieties. For maximum tonnage and palatability, cut Hay Master in the pre-boot stage. Cut at approximately six inches from the ground for quick regrowth. Once you have experienced Hay Master your search will end.

**Extra Sweet, Extra Juicy, All American Seed**
