

# EVERGREEN *Turf-Type Tall Fescue Blend*

*Evergreen Blend contains the varieties Regiment, Tomcat and Coronado Gold. With Regiment being included on the Virginia Turf Grass Variety Recommended List for 2006-2007.*

## **Introducing Evergreen Turf-Type Tall Fescue Blend**

Culminating years of research and development, we are proud to offer this premier turf blend specially adapted for Virginia and North Carolina. **Evergreen Blend** is a true three-way blend, utilizing cultivars that complement each other in both appearance and agronomic performance. **Evergreen Blend** offers an attractive drought tolerant sod with dark green leaf blades and a fine texture. Increased resistance to leaf spot, crown rust and brown patch lends this blend to be used where lower mowing heights are required. **Evergreen Blend** has a low nitrogen requirement of just 2 to 3 pounds of actual nitrogen per 1,000 square feet per year. In combination with its semi-dwarf characteristics, **Evergreen Blend** provides a true low-maintenance turf without sacrificing its attractiveness. As an added bonus, **Evergreen Blend** performs well in both full sun and in partial shade. Seeding rates should be 6 to 7 pounds per 1,000 square feet for new seeding and half rate for over-seeding. For ideal situations, prepare a well-tilled seedbed and sow in two directions. Good seed-to-soil contact is a must with seed placement no deeper than ½ inch. Fertilize and lime according to soil sample recommendations. For best results, mow at 3 or more inches for the first six weeks following emergence, limiting traffic until fully established.
